# Parental and endosymbiont effects on sex determination in haplodiploid wasps

Who is in control?

Elzemies Geuverink

The research described in this thesis was carried out in the Evolutionary Genetics group at the Centre for Ecology and Evolutionary Studies (CEES) and from 2015 onwards at the Groningen Institute for Evolutionary Life Sciences (GELIFES) of the University of Groningen, The Netherlands, according to the requirements of the Graduate School of Science (Faculty of Science and Engineering, University of Groningen).

This work was funded by grant number ALW 854.10.001 of the Netherlands Organization for Scientific Research (NWO) to Leo W. Beukeboom. The printing of this thesis was supported by the University of Groningen and the Faculty of Science and Engineering.

Cover design and layout: Elzemiek Geuverink

# Parental and endosymbiont effects on sex determination in haplodiploid wasps

Who is in control?

**PhD thesis**

to obtain the degree of PhD at the  
University of Groningen  
on the authority of the  
Rector Magnificus Prof. E. Sterken  
and in accordance with  
the decision by the College of Deans.

This thesis will be defended in public on

Friday 24 March 2017 at 11.00 hours

by

**Elzemiek Geuverink**

born on 15 February 1985  
in Enschede

**Supervisor**

Prof. L.W. Beukeboom

**Co-supervisors**

Dr. L. van de Zande

Dr. E.C. Verhulst

**Assessment committee**

Prof. M. Beye

Prof. J. Ellers

Prof. J.C. Billeter

# Contents

<b>Chapter 1</b>	General introduction	<b>7</b>
<b>Chapter 2</b>	Phylogenetic distribution and evolutionary dynamics of the sex determination genes <i>doublesex</i> and <i>transformer</i> in insects	<b>23</b>
<b>Chapter 3</b>	Maternal provision of <i>transformer-2</i> is required for female development and embryo viability in <i>Nasonia vitripennis</i>	<b>41</b>
<b>Box 1</b>	Nomenclature of genes and splice variants	<b>63</b>
<b>Chapter 4</b>	Alternative splicing and maternal provision of sex determination genes in the parasitoid <i>Asobara tabida</i>	<b>65</b>
<b>Chapter 5</b>	The <i>transformer</i> gene is duplicated in <i>Leptopilina clavipes</i> and regulated differently in arrhenotokous and <i>Wolbachia</i> -induced thelytokous individuals	<b>93</b>
<b>Chapter 6</b>	Identification, sex-specific splicing and maternal provision of <i>transformer</i> and <i>transformer-2</i> in arrhenotokous and <i>Wolbachia</i> -infected thelytokous <i>Asobara japonica</i>	<b>111</b>
<b>Chapter 7</b>	General discussion	<b>131</b>
<b>Box 7.1</b>	The identification of <i>tra2</i> , <i>tra</i> and <i>dsx</i> and their ever-transforming nomenclature	<b>137</b>
<b>Box 7.2</b>	DNA methylation as a possible epigenetic control of sex determination	<b>143</b>
